

Michael Nwankwo

Full-Stack & Mobile Developer

Nigeria | +234 811 550 1712 | michaelnwankwoscloud@gmail.com | github.com/Michael47009 | nxdev.42web.io/mick.html

PROFESSIONAL SUMMARY

Results-driven Full-Stack & Mobile Developer with production experience across marketplace platforms, admin dashboards, and cross-platform mobile apps. Proficient in React, Next.js, TypeScript, React Native, Laravel, and Node.js. Known for shipping clean, scalable code that solves real business problems — from investor-facing platforms to real-time data systems. Equally comfortable owning the frontend, backend, or a full end-to-end feature.

PROFESSIONAL EXPERIENCE

Lead Full-Stack & Mobile Developer

FutyBills — Marketplace & Social Platform | 2024 – Present

- Architected and shipped the full FutyBills web platform — a marketplace connecting startups with global investors — using React, Next.js, and TypeScript, taking it from zero to production.
- Built and launched the FutyBills mobile app with React Native, delivering a seamless cross-platform experience (iOS & Android) with marketplace flows, social feeds, and real-time notifications.
- Engineered complex multi-sided marketplace logic including talent-matching, transactional flows, and investor-startup connection features.
- Reduced frontend load times by optimising component architecture and implementing lazy loading across key routes.
- Collaborated directly with UI/UX designers to translate Figma designs into pixel-perfect, responsive interfaces across all device sizes.

Frontend Developer

Slate Nigeria — Waste Management Agency | Jan 2025 – Oct 2025

- Delivered a fully responsive admin dashboard from scratch that enabled operational teams to monitor field activities, track KPIs, and generate reports in real time.
- Integrated REST APIs to power live data visualisations — including charts, maps, and user activity feeds — reducing manual reporting effort for operations staff.
- Improved cross-device usability by refactoring layout and component structure, ensuring consistent performance on both desktop and mobile.
- Worked closely with backend developers to align API contracts with frontend data requirements, cutting integration bugs by establishing clear interface agreements.

Frontend Developer (Contract)

Chainindustry — DoToEarn Network | Aug 2025 – Sep 2025

- Developed interactive frontend features for a Web3 earn-and-learn platform, including live video interfaces and a course selection UI used by thousands of active users.
- Built clean, intuitive payment and enrolment flows that streamlined the user journey from discovery to checkout.
- Integrated frontend components with backend APIs to support real-time content delivery and user progress tracking.

Full-Stack Developer

Bluevult | 2024

- Designed and built a full-stack application from the ground up, owning both the React frontend and the Node.js/Express backend.

- Implemented secure JWT-based authentication and structured RESTful API integration, ensuring production-grade security from day one.
- Applied clean architecture principles and CI/CD-ready deployment practices, making the codebase easy to maintain and scale.

CORE SKILLS

Frontend	React.js, Next.js, TypeScript, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS
Mobile	React Native (iOS & Android)
Backend	Node.js (Express), PHP (Laravel), Python
Databases	PostgreSQL, MySQL, MongoDB, Redis
Tools & Infra	Git, GitHub, Docker (basic), CI/CD, AWS (basic), Firebase
Design	Figma-to-Code, Responsive & Mobile-First Design, Component Architecture

EDUCATION

B.Eng. Computer Engineering
University of Uyo, Nigeria
